Andy Bach, Associate Professor of Environmental Geography at WWU, will discuss his research which explores historical vegetation changes in the Ozette Prairies, and how these changes relate to human use of the region.

His research combines field methods of soil science, ecology and geomorphology, as well as using historical maps, to understand how natural landscapes of Washington have changed over time.

**WEDNESDAY, MAY 11**
**4:00PM - 5:00PM**
**MAP COLLECTION**
**(WILSON LIBRARY 170)**
